Use of routine data for clinical research – Part III: Trials

Donnerstag 20. März 2025 | 15:30 bis 16:30 h | N55 SR205

Prof. Dr. Tor Biering-Sørensen – Centre for Translational Cardiology and Pragmatic Randomised Trials, Department of Biomedical Sciences, University of Copenhagen

Embedding prospective randomisation within nationwide routine care data in pragmatic randomised trials

Prof. Biering-Sørensen's group is developing the potential of national registries for nesting randomised trials in them. In the past, they have been investigating the impact of electronic nudges with particular consideration of cardiovascular benefits on influenza vaccine uptake amongst eligible candidates. Recently, they have started evaluating the vaccine effectiveness of RSV vaccines in older adults.
